

Database Lookups

Generate perfect code for Microsoft ASP.NET.
Unleash your creativity and get things done.

Powerful AJAX-based Lookups

Popup lookup windows with infinite scalability allow sorting data, applying adaptive filters, and paging through thousands of records without effort. You can provide multiple views of the same data to make record selection even more efficient.

Replace Dated Controls With No Coding

No programming is required. The configuration is done via [data controllers](#) that are included in the source code of your application. There are no external dependencies in the code.

Advanced Sorting and Filtering

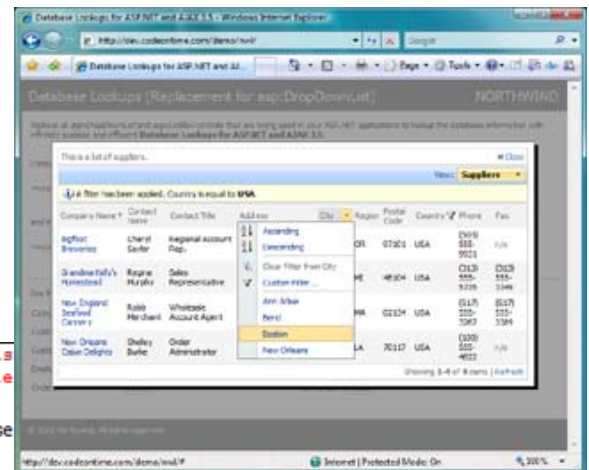

Custom and Adaptive filtering are both supported by any combination. Sort and filter your records with ease. No coding required.

Sophisticated Paging

Flexible and fast paging without post backs or annoying page flickering. End users can select the desired page size whenever information is presented as a grid of records. Record sets of any size are supported. Only the current page of a record set is retrieved.

Easy to Set Up

All required java script files are included in the application in source code form. [Syntax](#) compatible with *DropDownList*, *RadioButtonList*, and *ListBox* controls. There is no need to have a dedicated DataSourceControl for dynamic no-code data retrieval. The demo application can be generated for [Microsoft SQL Server 2005/2008](#) or [Oracle 11g](#) backend database server. The framework and [demo](#) application can be generated in *Visual C#* or *Visual Basic.NET*. There are no external dependencies. Complete source code is provided.

```
<asp:DropDownList ID="ProductsLookup" runat="server" DataValueField="ProductID" DataTextField="ProductName" />
```

and that of a Database

```
<aquarium:DataViewLookup ID="ProductsLookup" runat="server" DataValueField="ProductID" DataTextField="ProductName" />
```

See the run-time difference below:
