

Export to Spreadsheet

Data Aquarium Framework applications are now supporting automatic exporting in Comma-Separated Values format.

Apply filters and sort your grid views the way you like. Select *Actions* on action bar and choose *Export to Spreadsheet* option.

The screenshot shows a web browser window displaying a data grid for 'Customers'. The grid has columns for Customer, Contact Title, Address, City, Region, Postal Code, Country, and Phone. A menu is open over the grid, showing options: 'Export to Spreadsheet', 'View RSS Feed', and 'My Command'. The 'Export to Spreadsheet' option is highlighted.

A data file will be created on the server and a new web browser window will be launched to download the result. Your spreadsheet processor will automatically launch and displayed data.

The screenshot shows a web application interface for 'MYCOMPANY' displaying a list of customers. A filter is applied: 'Country is equal to USA'. The data is presented in a grid view with columns: Customer #, Company Name, Contact Name, Contact Title, Address, City, Region, Postal Code, Country, and Phone. An Excel spreadsheet window titled 'export[1].csv - Microsoft Excel' is overlaid on the grid, showing the same data with columns A through L. The Excel window shows the 'Home' tab with various formatting options.
